

Interior-Atmosphere Coupling for Super-Earths and Sub-Neptunes

Komal Bali¹, Caroline Dorn¹, Dan Bower², Simon Grimm^{1,3}

¹Institute for Particle Physics and Astrophysics, ETH Zürich; ²Institute of Geochemistry and Petrology, ETH Zürich; ³University of Zürich

Sneak Peek:

- We aim to better understand the diversity of interiors and atmospheres of Super-Earths and Sub-Neptunes.
- Our interior models are important tools for better interpretation of data from missions like Kepler, TESS, CHEOPS and JWST.

If this poster overview peaked your interest, do come and check out the updated poster with some cool plots on **Monday (17th June)** in Leiden! Or catch anyone of us during the week:)
